Start

PROJECT OVERVIEW

Our project is an interactive Rock Paper Scissors game, this project provides a fun and engaging way for users to play classic game while keeping in the track of scores and also getting rewarded consecutive wins with bonus points.

FEATURES

- Interactive gameplay with user choosing Rock, Paper, or Scissors
- Random computer choice simulation
- Score tracking for each round
- Bonus points for 3 consecutive wins
- Selection rounds of play is manual
- Clear display of results after each round and a final result after the gameplay ends

FUNCTIONS USED

Randomization: `rand()` generates random numbers for the computer's choices, making the game unpredictable.

Seeding: Used `srand()` with `time(0)` to ensure different random sequences on each run.

Game flow control:

- for loop: Repeated gameplay for user-specified rounds.
- do-while loop: Validated user input (choices 1-3).

Game logic: Used conditional statements to:

- Compare player and computer choices.
- Determine round winners.
- Apply bonus points after 3 consecutive wins.

DRY-RUN

1. User Input :

- User enters the number of rounds
- User selects Rock, Paper, or Scissor for each round from the given numbers assigned to these specific values

2. Processing :

- Computer randomly selects Rock, Paper, or Scissors Game determines winner of the round
- Score and consecutive wins are updated by each one time play
- Bonus points awarded for three consecutive wins

3. Output :

- Display winner of each round
 - Show score, bonus points, and total points after each
- Display final score at the end of all rounds

4. End :

Program terminates after showing final results

BENEFITS

- Makes a classic game interactive and engaging
- Helps users understand simple programming logic (loops and if else statements)
- logical thinking with a bonus point system
- Clear scoring system which improves user experience
- Fun and motivating for the users

CONCLUSION

Our project covers important aspects such as user interaction, input validation, score tracking, and logical processing. This will help beginners understand programming concepts in C in a fun and practical
